Quick Start

What is Racket Sports Pro?

Racket Sports Pro is an all-in-one athlete and coaching management app built for racket sports professionals. It gives you one organized place to manage athletes, lessons, Player Development Goals, Development Notes, groups, teams and rosters, drills, match performance, communication, scheduling, and coaching tasks.

Elite Coaching. Simplified.

The basic workflow

Complete Coach Profile -> Add Athlete(s) -> Schedule / Record a Lesson -> Track Development -> Review Competition

Start with the tools that fit the way you coach

You do not need to use every RSP feature. Start with the parts that solve an immediate need in your coaching. For many coaches, that means Athlete Profiles, Lessons & Schedule, Player Development, and Development Notes. Then add Groups, Teams & Rosters, Match Analysis, Drill Library, Coach Planner, and other tools as they become useful.

Coach more. Type less with voice-to-text. Keep better records.

Your First Five Steps

1

Complete Your Coach Profile

Review your name, contact information, sport(s), and other coach details so your account is ready for daily use.

2

Add Your Athlete(s)

Create an Athlete Profile for each player you actively coach. Add the information that is useful to you now; you can build the athlete's record over time.

3

Schedule or Record a Lesson

Use Schedule to add an upcoming individual or group lesson. After training, complete the lesson and preserve the lesson history, training focus, notes, and other useful information.

4

Start Tracking Player Development

Create a Player Development Goal when there is a clear development priority. Use Development Notes to maintain the ongoing coaching story without creating a new lesson - Notes tell you what the athlete is working on, what you observed, progress, and what should come next.

5

Explore Match Analysis

Use Match Analysis when you want to go beyond the final score. Record point-by-point performance, Coaching Observations, and optional Competitive Behavior observations, then review the completed Match Report to help inform future training.

Start simple. Build the athlete's record as you coach.

A Few Things to Remember

You don't have to use every feature.

RSP is flexible by design. An independent teaching professional, school coach, club coach, or competitive-team coach can use the tools that match the way they work.

Development Goals and Development Notes serve different purposes.

A Development Goal identifies where the athlete is going. Development Notes create the ongoing chronological coaching record of what is being addressed, what you observed, progress, and what should be worked on next.

Match Analysis includes optional Competitive Behavior.

During a match, Competitive Behavior can be recorded selectively in the point-description/outcome stage when something meaningful occurs. After the match, the coach can also complete an overall Competitive Behavior assessment. Live observations and the overall assessment remain separate so they support - rather than replace - coaching judgment.

Use voice-to-text.

For text fields throughout RSP, use your device keyboard's built-in microphone when available to speak notes instead of typing them. This is especially useful immediately after lessons, matches, and player conversations.

Let the athlete record grow naturally.

The value of RSP increases as lessons, Development Notes, goals, match reports, ratings, and communication build a continuous record of the athlete's development.

Train. Observe. Record. Review. Apply to Development.

Need More Help?

Download the **Full Racket Sports Pro User Guide** for detailed instructions on Athlete Profiles, Lessons & Schedule, Player Development Goals, Development Notes, Groups, Teams & Rosters, Match Analysis with Competitive Behavior, Drill Library, Coach Planner, communication, and other features.
